

Design

Fer Hydraulik, with more than 30 years of experience in fluid power, has the capabilities to design specific solutions to any kind of request. According to the customers' need, the company can develop integrated block, cylinders, personalized hydraulic power packs, and more. Thanks to its technical competences, Fer Hydraulik commercializes services and products specifically made to satisfy at best customer's expectations.

Fer Hydraulik S.r.l. has been founded in 1989 as a hydraulics dealer in the German market for Walvoil directional valves, Casappa gear pumps and motors.

Over the years Fer Hydraulik has developed its own range of cartridge valves, special integrated blocks in aluminium (cast iron and steel), complimented with a wide range of standard and bespoke power packs to the customer's specification. The marketing of a wide range of hydraulic components such as gear pumps and motors, cylinders, directional control valves, heat exchangers, pump over-gear, mechanical and electromagnetic, couplings and many other products makes it possible for Fer Hydraulik to evaluate, design and supply complete hydraulic systems, supported by a technical and commercial department always available to solve the customer's problems. Fer Hydraulik currently exports its products to many countries all over the world.
